

Comos Direct – for fast feedback

Comos Direct is a software tool specifically designed for workshop activity. Its optimised touch screen interface and easy handling enable fast data input and quick response times.

Maintenance activities have become increasingly complex in recent years – and so has the related software. This has resulted in time-consuming data maintenance in complicated software systems and the necessity of training workshop staff in their use. **Comos Industry Solutions** has solved this issue by developing the **Comos Direct** module, which sets new standards in terms of practicality, acceptance and data quality. The touch screen user interface is greatly simplified and displayed information is limited to the current task to be processed. The combination of the optimised user interface with a card reader and a barcode scanner enables users to easily log on and be identified by means of a smart card or barcode.

The decisive advantages for you:

- “ Optimised for workshop use with greatly simplified interface ”
- “ Secure user logon and fast access to any object via barcode scanner ”
- “ Straightforward data input and greatly reduced response times ”
- “ Boilerplates enable optimum analysis ”
- “ Optional synchronisation with ERP systems ”

Comos Direct

The clear object selection with the scanning function and the use of defined boilerplates enable the optimum input and analysis of data. Feedback on time and material requirements is available directly on the terminal and can be synchronised with ERP systems.

Features at a glance:

“Touch screen terminal with card reader and barcode scanner”

“Quick and simple user identification using smart card or barcode”

“Quick selection of objects; navigation by scanning barcodes or RFIDs”

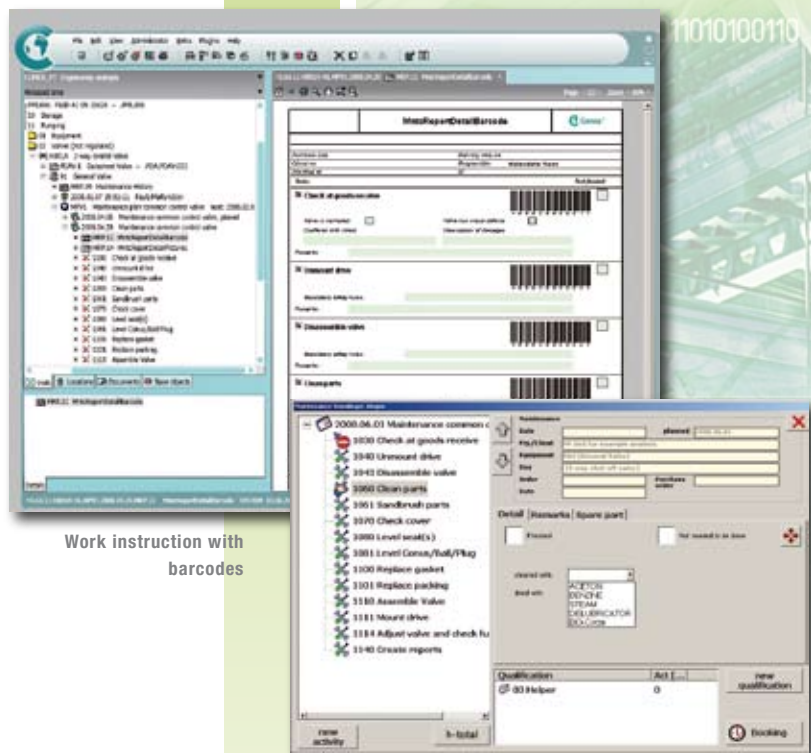

“Greatly simplified, intuitive interface with displayed information limited to the current task to be processed”

“Task objects and boilerplates enable easy handling and optimum feedback analysis”

“Feedback on time and material requirements directly on the terminal; optional synchronisation with ERP systems”

“Entry of additional tasks and qualifications”

“Entry of any kind of technical feedback”

Work instruction with barcodes

Touch screen-capable view of a work package

Scanning a step in the workflow
