

The background of the top half of the page is an abstract composition of horizontal motion-blurred lines in various shades of blue and teal. Interspersed among these lines are numerous small, white, right-pointing chevrons, creating a sense of forward movement and data flow.

# Comos Express – efficient engineering in record time

**Comos Express is a software tool that facilitates the automation of the distribution as well as the planning phases of modular process machines and plants to a very large degree.**

With **Comos Express**, machines and plants can be configured through a standard user interface (modular system). In doing so, the configuration is reduced to selecting the options or defining the parameters which affect the configuration. The assembly groups and complete machines/plants that are used as templates for this purpose can be stored in any project in the **Comos** database. The tool can be used as early as in the distribution phase and, with a degree of completion of up to 100%, facilitates the creation of documents relevant to the offer (offer, bill of quantities, installation plan) by the sales engineer. It can also be used for further planning or a possible re-configuration of the machine or the plant.

#### **Key features to benefit you:**

- “ Automation of the offer- and project-planning phase of modular process machines and plants as far as possible. ”
- “ Intuitive handling ”
- “ Continuity in engineering ”
- “ Degree of completion of up to 100 % as early as in the distribution phase. ”
- “ Enormous increase in efficiency during the complete project. ”

# Comos Express

## Further important features:

“ The complete configuration is carried out via a standard, user-friendly interface. ”

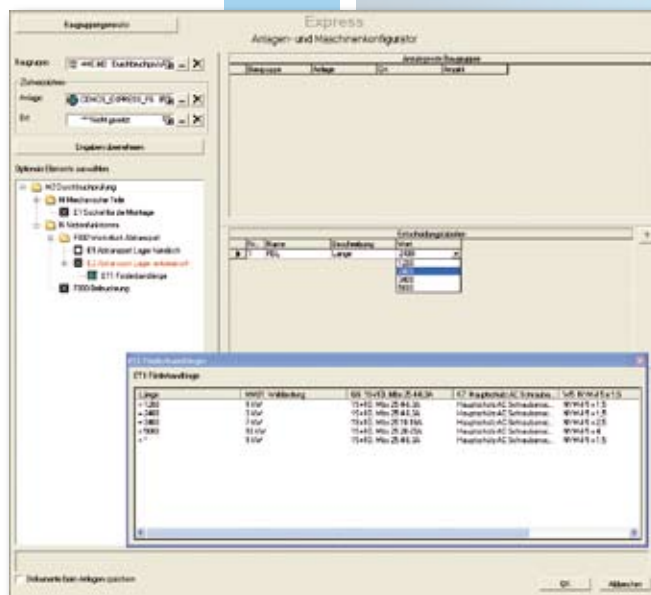

“ Through the configuration based on the modular system, individual construction elements can be duplicated and easily re-used. ”

“ The configuration is reduced to the selection of the options and the definition of the parameters which have an influence on the configuration. Thus **Comos Express** does not make any high demands on the user. ”

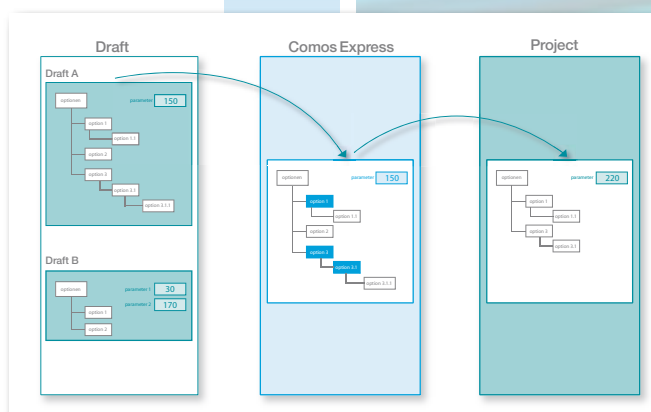

“ Continuity in engineering from process engineering, electrical engineering and fluid technology to I&C technology and automation. ”

“ Thanks to the degree of completion of 100%, which has already been achieved in the distribution phase, all documents relevant to the offer are at the sales engineer's disposal within a short period of time. ”

“ The application of **Comos Express** is by no means restricted to the distribution phase and the basic engineering. The software can also be used for a possible re-configuration. ”

A Siemens Business

As a world-leading provider of comprehensive Life Cycle Management systems, **Comos Industry Solutions** offers professional software solutions and services. The integrated **Comos** concept is designed to cater for both customer-specific requirements and established industrial processes. The individual modules can be used as either stand-alone software or as a complete software suite. **Comos** is the complete solution for end-to-end basic and detail engineering processes, catering for all industrial plant life-cycle phases. The **Comos** philosophy, products and services have long been trusted by plant designers, operators and contractors.
